

# Dungeons & Dragons

Ages 14+ to Young Adults

## Build Essential Social Skills While Having Fun !

Through engaging in imaginative role-playing, collaborative problem-solving, and interactive storytelling, children with ASD can enhance their communication skills, emotional understanding, and social interactions. Our Dungeons and Dragons program offers a structured yet flexible environment where participants can practice turn-taking, empathy, teamwork and decision-making skills in a supportive setting. The game's narrative elements also encourage creativity and self-expression, fostering a sense of empowerment and confidence in neurodiverse children as they navigate social challenges and build meaningful relationships.

## What is included in the program ?

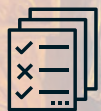

### Software and App Downloads

Our preferred software is FREE to download and use – no subscriptions required ! Access to our character sheet and digital dice roller apps is also provided FREE of charge for each participant.

### Choice of Character and Custom Miniature

Work with our DM to develop your own individualised character or choose from our range of pre-made characters, then have fun designing your own custom miniature using our choice of on-line designer tool.

### Rule Reference Guides

If you're new to D&D or an experienced player, we have you covered. Each participant will receive a FREE rule reference guide written by our DM to help you learn the rules of the game.

### Clinical Assessment and Report

Our clinical nurse consultant specialising in autism will provide a comprehensive clinical assessment that can be used to support your approved NDIS program.
